

## INFORMATION MANAGEMENT SYSTEM

Maximize your efficiency with the  
computerized control system  
LabPlus laboratory

LabPlus is a Laboratory Information Management System (LIMS software) that will provide consistent, accurate and timely quality information meeting the needs of your organization.

---

## LabPlus technology offers competitive advantages

- A generic solution, adaptable to a wide range of process requirements
- Fast to implement and able to yield immediate benefits
- Open architecture that can be easily integrated across your organization
- A complete solution for your laboratory and quality information management needs
- An attractive price
- Easy to use

## Technical support and software update

By selecting LabPlus you also select a technical support service always ready to help you leverage your investment in LabPlus. We offer update programs designed to maintain the level and quality of the Functionality of LabPlus, ahead of the competition.

# The LIMS Solution for your industry

# Functions

- **Analytical Profiles** offer advanced sample login and grouping capabilities that allow the implementation of stability studies, complex product sampling plan and testing schema.
- **The scheduling Service** provides increased capabilities to customize conditions that trigger events with the ability to schedule the execution of any system workflow, as well as to initiate requests to the Notification Agent.
- **The Notification Agent** allows the configuration of events that will be monitored by the system along with the notification mechanisms should preset conditions be reached.
- **The Workflow Modeler** allows customization of system workflows as with LabPlus, analytical operations are executed from within a workflow. A workflow can contain single or multiple steps.
- **Quality Controls** feature provided increased capabilities, improved tracking and control of laboratory operations. All QCs integrate similar attributes and provide enhanced capabilities such as charting, and management of multilayer of controls
- **Product, and Grades** functions with Multi-Specifications capabilities provide a product grade concept which allows targeting of specific grades for a given product and reclassification of any product grade after analysis.
- **The System Security** is applied through roles. The authentication and authorization services are located in the business layer. These mechanisms provide enhanced system reliability with greatly reduced configuration and maintenance efforts for multi-user and multi-site installations. .

# Benefits

- Calculating results
- Processing samples
- Generating reports
- Automatic data acquisition
- Planning and allocating workloads
- Registering and identifying samples
- Bar code reading equipment
- Optimal laboratory workload planning
- Reduced risk of calculation and data capture errors
- Information is accessible for extended periods of time
- Automatic detection and notification of configurable events
- Less time is spent searching for results and sample information

**LabPlus is a powerful tool that will have a positive impact on the ability of your organization to maintain and increase customer satisfaction and contribute to the success of your business.**

Moreover, LabPlus laboratory software allows interfacing with various equipment used such as:

- GC/MS
- GC
- HPLC
- Scales
- pH metre
- ICP-MS
- X-ray diffraction (XRD)
- Atomic absorption spectrometry
